

TLS MailPanel Formidable Email Defense

Managed Email Services

Did you know that about 60% of all email is considered spam? The average person receives over 2,500 spam messages annually. About 28% of users reply to spam email, which generally just increases the amount of spam these users receive and give spammers more reason to send future annoying messages. Don't succumb to the flood of spam email in your inbox. Let TLS take care of it!

TLS has a customizable service to help you deal with spam and viruses automatically. The service even shows you just how much is being blocked, how many may be infected with viruses, and other powerful information tools.

Advantages of MailPanel

- Eliminates need for extra equipment
- Provides reporting and advanced graphs
- Access to web portal from everywhere
- Exchange server and other in-house mail servers supported

Customers can control all the features of their TLS MailPanel account. No maintenance personnel or technicians to call for changes. At the click of a mouse, features such as whitelist, blacklist and spam settings may be controlled through an easy-to-use web portal.
