

TLS.NET Hosted Conferencing

Audio & Web Conferencing

TLS.NET offers a versatile online meeting experience to maximize your time, resources, productivity and speed to market. The on-demand web conferencing service puts you instantly in touch online and by teleconference call with customers, colleagues, partners and suppliers anytime, anywhere.

This service is designed to optimize your meeting experience making it easy to share ideas with colleagues in different geographic locations and time zones. It offers simplified navigation, seamless audio integration, advanced features and tools, and improved functionality. One-click controls make sharing documents and applications easy.

Key Benefits

- Reach a global audience.
- Interactive tools engage your audience and share your ideas effectively.
- Utilize three levels of security, including a seven-digit access code and chairperson passcode with a third conference-specific passcode option.
- Manage, record, edit and customize.
- Change account options and pass presenter control.
- Customize online registration to collect specific audience information.
- Extend the impact, retention and shelf life of your web conferences and trainings with podcast episodes.
- Create and publish audio podcasts with visuals to services like iTunes®.
- Collaborate online and in real-time for a better bottom line.
- Reduce travel, expenses and downtime, while increasing productivity.

Key Reasons to Conference Online

- Audio and web communication with just one set of login numbers to remember.
- Conduct global business simultaneously online and by teleconference anytime, virtually anywhere.
- Connect your geographically dispersed organization instantaneously to maximize time and productivity.
- Publish audio podcasts with visuals to extend impact, reach and shelf life of web conferences and trainings.
